

Exp- 21 Pattern Recognition

Program:

```
patterns = ["circle", "square", "triangle", "circle",  
"square"]
```

```
pattern = input("Enter a pattern: ").lower()
```

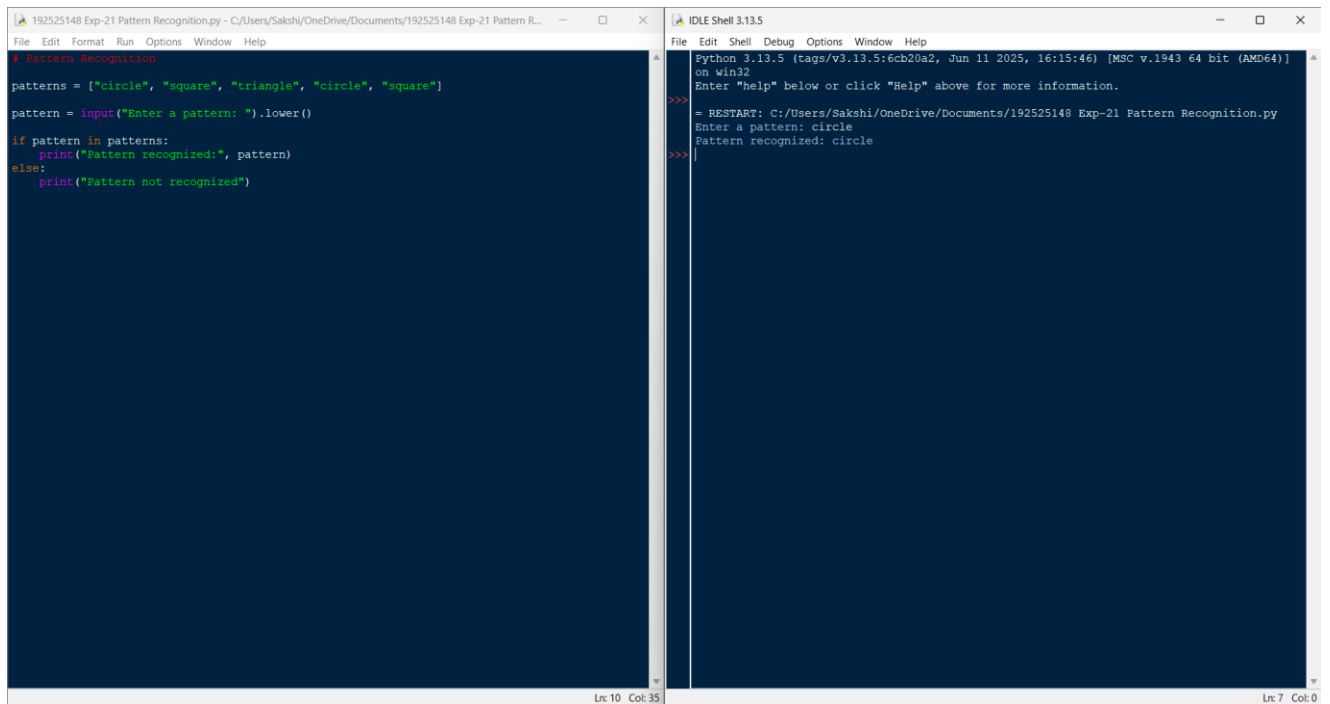

```
if pattern in patterns:
```

```
    print("Pattern recognized:", pattern)
```

```
else:
```

```
    print("Pattern not recognized")
```

Output:

The screenshot displays a Python IDE with two windows. The left window, titled '192525148 Exp-21 Pattern Recognition.py', contains the following code:

```
# Pattern Recognition  
patterns = ["circle", "square", "triangle", "circle", "square"]  
pattern = input("Enter a pattern: ").lower()  
  
if pattern in patterns:  
    print("Pattern recognized:", pattern)  
else:  
    print("Pattern not recognized")
```

The right window, titled 'IDLE Shell 3.13.5', shows the execution output:

```
Python 3.13.5 (tags/v3.13.5:6cb20a2, Jun 11 2025, 16:19:46) [MSC v.1943 64 bit (AMD64)]  
on Win32
